

Running .ipynb Files on Your System

Option 1 (Recommended): Use Google Colab

Google Colab lets you run Jupyter notebooks in your browser without installing anything.

Steps:

1. Open a web browser (Chrome, Firefox, Edge, Safari).
2. Go to <https://colab.research.google.com>.
3. Sign in with your Google account.
4. Click **File** → **Upload Notebook**.
5. Select the .ipynb file from your computer.

Test Access Before Class:

- Open [Google Colab Test Notebook](#).
- If you see a blank notebook open, you're good to go.

If Colab doesn't work on your system, use Option 2 below.

Option 2: Install Anaconda (Includes Jupyter Notebook)

Anaconda is a local Python distribution that comes with Jupyter Notebook.

Step 1: Download Anaconda

1. Open a browser and visit www.anaconda.com/products/distribution.
2. Select your operating system: Windows, macOS, or Linux.
3. Download the **64-bit Graphical Installer for Python 3.x**.

Step 2: Install Anaconda

- **Windows:**
 - Double-click the .exe file.
- **macOS:**
 - Double-click the .pkg file.
- **Linux:**

- Open Terminal.
- Run:
- `cd ~/Downloads`
- `bash Anaconda3-xxxx-Linux-x86_64.sh`

(replace xxxx with the actual version number).

Follow on-screen prompts → Accept license → Choose installation location → Click Install.

Step 3: Open Jupyter Notebook

1. Launch **Anaconda Navigator**.
 - Windows: Start Menu → Anaconda Navigator.
 - macOS: Launchpad → Anaconda Navigator.
 - Linux: Run `anaconda-navigator` in terminal.
2. Click **Launch** under Jupyter Notebook.
3. A browser window will open with the Jupyter interface.

Step 4: Test Notebook Setup

1. In Jupyter Notebook, click **New → Python 3**.
2. Type:
3. `print("Setup successful!")`
4. Press **Shift+Enter**.
5. If it prints Setup successful!, your installation works.
